“Health Systems, Traditional and Non Conventional Medicine”

Objectives and Goals

The master provides participants with tools of theoretical and practical knowledge useful for the formation of professionals capable of integration economic and management aspects with those of clinical care and different medicines. Provides tools for quantitative and qualitative analysis of health related issues, aimed at the design and evaluation of health systems at regional, National and International levels and the study of health inequalities. Confers power to tackle the issue of health, person-centred medicine, traditional medicine and non-conventional systems of health based anthropology. Professional growth and expertise to improve the management of the Hospitals, care institutions, health centres', in line with the new demand of care. Provides tools for the development of managerial skills in key roles in planning, programming, monitoring and evaluation research, within the complex management of health services and nursing research.

Themes addressed in the master

- * Contributions to the interdisciplinary study of health systems.
- * Epistemology and theoretical models for the study of health systems.
- * The health systems: models, competition, integration.
- * The global health.
- * The National Health and regional health systems.
- * Third sector and health systems.
- * Structures of welfare health.
- * Biomedicine, Non-Conventional and Traditional Medicine.
- * The Non-Conventional and Traditional Medicine in health Systems.
- * Health inequalities.
- * Research methodology: qualitative and quantitative methods to health.
- * Designing systems to health.
- * The relationship of care.
- * Bioethics.

Recipients

Are allowed European and non European citizens have at least a degree not lower the first level degree (BS) or equivalent qualifications.

The master is direct in particular to:

- * Doctors, dentists, veterinarians, biologists, chemists;
- * Directors, executives and managers;
- * Graduates in humanities and social sciences;
- * Local health workers, the hospital with departments of health;
- * IRCCS, Foundation and Hospices; palliative care centers;
